

Synthetic Grass For Dogs

Tianlu [synthetic grass for dogs](#) uses safe, non-toxic, and premium materials that are extensively tested and suitable for any environment. Our artificial lawns are quick and easy to install, which means that when you decide to switch to synthetic grass neither you nor your pet will have to go without the use of your garden for very long.

[It's A Common Misconception That Animals Won't Enjoy Artificial Grass As Much As The Real Thing.](#)

Dog owners especially might worry about their pet not liking the feel, smell or look of artificial turf, which may lead to problems inside the house as well as out. In fact, animals find artificial grass soft and enjoyable and will play on and utilise it just as they would real grass.

[The Benefits Of Artificial Grass](#)

Because synthetic grass is so easy to maintain your pet will be able to play on it all year round without the need for having to keep them inside when you want to fertilise, mow, or weed your lawn using chemicals.

And because it won't freeze over your dog or cat will enjoy running about outside even on the coldest of days.

Caring For Your Artificial Lawn

Pets can be messy, but with artificial grass, you won't have to worry about dog wear and tear, staining or smells.

Artificial grass is permeable so urine drains through the turf surface and faeces can be easily removed, leaving behind a fresh, undamaged lawn. You won't see any muddy patches on your artificial grass, nor will you see any muddy paw prints inside your house. Your garden will stay looking as fresh as your floors, and your pet will be able to enjoy the best of both worlds.
